Reviews

This is the greatest book we have read through till now. It is probably the most amazing book we have go through. I am just happy to tell you that here is the greatest book we have read through during my individual daily life and may be he best ebook for possibly.

(Eliseo Leffler)

COMMUNITY-BASED OPERATIONS RESEARCH

Springer-Verlag Gmbh Sep 2011, 2011. Buch. Book Condition: Neu. 243x167x28 mm. Neuware - Community-based operations research (CBOR) is defined as the collection of analytical methods applied to problem domains in which interests of underrepresented, underserved, or vulnerable populations in localized jurisdictions, formal or informal, receive special emphasis, and for which solutions to problems of core concern for daily living must be identified and implemented so as to jointly optimize economic efficiency, social equity, and administrative burdens. This domain was first discussed in a chapter in *Tutorials in Operations Research 2007 - OR Tools and Applications: Glimpses of Future Technologies (INFORMS 2007)* by Johnson and Smilowitz and subsequently in an article that appeared in the February 2008 issue of *OR/MS Today*. Community-based operations research is not primarily a new methodology, or theory, but a framework for applications of models and methods to address problems with common characteristics, as listed above. The relevant analytical tools for CBOR come primarily from the decision sciences management science, operations research, industrial engineering, and the like: they are intended to help individuals and organizations make better choices regarding strategies to design, services to deliver, facilities to locate, infrastructure to design, and so on. CBOR applications are expected to draw upon methods and tools of academic disciplines that comprise public sector-focused domains: public policy, public administration, public management, urban and regional planning, urban affairs, human services, public health, gerontology, and others. The research in this book is intended to be normative (defined by stylized models of the real world) and prescriptive (what ought to be done) in nature. However, other research perspectives, defined by descriptive and positive approaches traditionally used in observation-based social sciences, are appropriate as well. For example, an analysis of administrative data and field observations regarding how certain important problems are actually addressed by...
