It becomes an awesome publication that I actually have actually read. It really is writter in simple terms and not difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Aside from this, it may not be amiss to say here that this book is the outcome of the authors interest in the rapidly growing Portland cement industry in America. The methods both of chemical analysis and physical examination have been explained with, what may seem to the experienced chemist, useless detail, but it must be remembered that many of the cement manufacturing companies are employing young men fresh from technical schools, whose college training may be excellent, but whose laboratory experience upon work of this kind is usually limited to a few analyses. Probably the greater number of young cement chemists are required to make physical tests without having had any training whatever in the subject. It is for these, as well as the young engineer and the student of chemistry and engineering, that the notes and explanations have been added to the methods. The author wishes to acknowledge his indebtedness to Prof. J. Madison Porter, C.E., of Lafayette College, and to Dr. P. W. Shinier, of Easton, Pa., for their kind help. Professor Porter read the section upon the physical testing of cement and added much to its value by his suggestions for its improvement.
