In presenting new work, inexperienced teachers are apt to overdevelop. Be wary of long tedious presentations of matter that is beyond the appreciation of young minds, especially in the lower grades. While it is necessary for the teacher to explain and develop new principles, it is more important to follow this up with sharp quick drills, for there is no surer way of finding out if principles are understood. In developing a working principle or explaining a problem, resolve the same into a series of steps and make sure that the class can do the same. The following plan, which may be used in presenting new work in any of the school subjects, lends itself readily to preparatory lessons in arithmetic.
